#DigitalEuropeProgramme

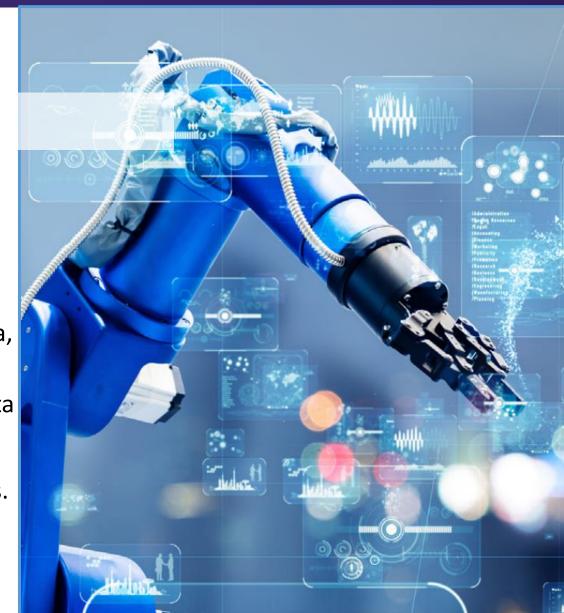

Data Spaces one definition (of many)

A data space can be defined as a federated data ecosystem based on shared policies and rules. The users of such data spaces are enabled to access data in a secure, transparent, trusted, easy and unified fashion.

Data holders are in control of who can have access to their data, for which purpose and under which conditions it can be used.

From a technical perspective, a data space can be seen as a data integration concept which does not require common database schemas and physical data integration, but is rather based on distributed data stores and integration on an "as needed" basis.

Design principles for common European data spaces

<u>Tools</u> to control, pool, access, use and share all types of data in a fair, reasonable and non-discriminatory manner

Data access and control

Governance

Governance structure

(mechanisms) to ensure fair, transparent, proportionate and non-discriminatory access to, sharing and use of data.

Comply with applicable <u>EU legal framework</u>, and put in place adequate measures to prevent unauthorised access to data

Respect of EU rules and values

Interconnection and interoperability

Based on common standards, FAIR principles to progressively lead to single EU data space

Open to all actors
(organisations/individuals)
that respect ELL rules and

that respect EU rules and values and comply with data space rules

Openness

Technical data infrastructure

Common technical data infrastructure
(including sector-specific framework
and cybersecurity- and data
protection-by-design principles)

Data spaces common elements

User

Individual, company, public bodies, or complete ecosystems of organisations (e.g. data hub, data marketplaces

The EC's role in supporting the creation of data spaces

Increase trust in data sharing (neutral data intermediaries, i.e. the Bring stakeholders together orchestrators of the data spaces with a common EU data Data policy, promote use of Work with data space guidelines Governance stakeholders Act Support the Commission in: Issuing guidelines to facilitate the Unlock the potential of the development of the common EU's industrial data (IoT European data spaces data), ensure fairness in the **European Data** allocation of data value Identifying the relevant **Data Act Innovation** among the actors of the data standards and interoperability **Board (EDIB)** economy requirements for cross-sector data sharing Facilitate interoperability of data, data sharing Offer a technical research on new technologies for the mechanisms and services solution development common European data **Funding** (incl. data spaces) smart middleware spaces between sectors Simpl (notably HORIZON EUROPE in collaboration with ADRA partnership) Help developing data spaces and pooling existing data deploy common European data spaces in infrastructures (cloud federation) strategic sectors/domains (DIGITAL)

Common European data spaces

High Value Datasets from public sector

- Driven by stakeholders
- Rich pool of data of varying degree of openness

- Sectoral data governance (contracts, licenses, access rights, usage rights)
- Technical tools for data pooling and sharing
